

Product description Mobile Device Management (MDM)

With the RIO-MDM you get a surface on the device that puts the Android device into a Kiosk mode, in which a defined number of apps are available. This is used for a controlled handling of the devices and a protection of business-related data. The RIO App Store is also available on the device.

The platform for managing mobile Android devices & apps is maintained by RIO Support. With the platform you can manage your devices easily and securely. The solution consists of a Mobile Device Management (MDM) and a Mobile App Management.

RIO App Store:

- Store with RIO-Apps
- Extension with own applications possible (higher data volume than available may be required here. Further information is available from RIO Support).

Mobile Device Management:

- Secure Kioskmode
- Limitation of the device functionality
- Defining different user profiles
- Device lock & remote deletion
- Device monitoring

Mobile App Management:

- Release of defined applications
- Remote App Updates
- Delete Apps Remotely
